Mark Scheme for Autumn 2021

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

Annotations and abbreviations

| Annotation in RM assessor | Meaning |
|---|---|
| ✓ and ✕ | |
| BOD | Benefit of doubt |
| FT | Follow through |
| ISW | Ignore subsequent working |
| M0, M1 | Method mark awarded 0, 1 |
| A0, A1 | Accuracy mark awarded 0, 1 |
| B0, B1 | Independent mark awarded 0, 1 |
| SC | Special case |
| ^ | Omission sign |
| MR | Misread |
| BP | Blank Page |
| Seen | |
| Highlighting | |
| | |
| Other abbreviations in mark scheme | Meaning |
| dep* | Mark dependent on a previous mark, indicated by *. The * may be omitted if only one previous M mark |
| cao | Correct answer only |
| oe | Or equivalent |
| rot | Rounded or truncated |
| soi | Seen or implied |
| www | Without wrong working |
| AG | Answer given |
| awrt | Anything which rounds to |
| BC | By Calculator |
| DR | This question included the instruction: In this question you must show detailed reasoning. |

| Question | | Answer | Marks | AO | Guidance | |
|----------|--|---|-------------------------|------------|---|---------|
| 1 | | Initial Elastic PE = $= \frac{24 \times 0.9^2}{2 \times 0.6}$ | B1 | 1.1 | Use of $\frac{\lambda x^2}{2l}$ with attempt at finding extension (ie not just $x = 1.5$) | 16.2 J |
| | | Final Elastic PE = $= \frac{24 \times 0.4^2}{2 \times 0.6}$ | B1 | 1.1 | Use of $\frac{\lambda x^2}{2l}$ with attempt at finding extension (ie not just $x = 1$) | 3.2 J |
| | | Increase in PE = $0.4g \times 2.5$ | M1 | 1.1 | Attempt at use of “ mgh ” to find the increase of gravitational PE from initial position to ceiling | 9.8 J |
| | | “16.2” = “3.2” + $\frac{1}{2} \times 0.4v^2$ + “9.8” | M1 | 1.1 | Attempt at conservation of energy with consideration of KE and their PE | 8.624 J |
| | | $v^2 = 16 \Rightarrow$ speed is 4 m s^{-1} | A1 [5] | 1.1 | Not \pm . Units required. | |

| Question | | Answer | Marks | AO | Guidance | |
|----------|-----|--|--|--|--|--|
| 2 | (a) | $\mathbf{I} = m\mathbf{v} - m\mathbf{u} = 2(-3\mathbf{i} + \mathbf{j} - (5\mathbf{i} + 16\mathbf{j}))$ $= 2(-8\mathbf{i} - 15\mathbf{j})$ $I = 2\sqrt{(-8)^2 + (-15)^2}$ $= 2\sqrt{289} = 34$ $\cos \theta = \frac{\mathbf{I} \cdot \mathbf{i}}{ \mathbf{I} \mathbf{i} } = \frac{-16 \times 1}{34 \times 1}$ $\theta = \cos^{-1} \frac{-8}{17} = 118.1^\circ \text{ or } 2.06 \text{ rad}$ | M1 A1 M1 A1 M1 A1 [6] | 1.1 1.1 1.1 1.1 1.1 | Correct use of formula (award if $m\mathbf{u} - m\mathbf{v}$) Allow $16\mathbf{i} + 30\mathbf{j}$ or $\sqrt{(-16)^2 + (-30)^2}$ oe Attempting to use the dot product of \mathbf{I} and \mathbf{i} to find the required angle | or using the cosine rule on vectors $\mathbf{u}, \mathbf{v}, \mathbf{I}$ to reach $ \mathbf{I} = 34$ or use of ordinary trigonometry eg $\tan \theta = \frac{-30}{-16}$ |
| 2 | (b) | $\text{Init KE} = \frac{1}{2} \times 2 \times (5^2 + 16^2)$ $\text{Final KE} = \frac{1}{2} \times 2 \times ((-3)^2 + 1^2)$ $\text{Loss} = 281 - 10 = 271 \text{ J}$ | M1 M1 A1 [3] | 1.1 1.1 1.1 | 281 J 10 J | |

| Question | | Answer | Marks | AO | Guidance |
|----------|-----|---|--|--|---|
| 3 | (a) | $[F] = \text{MLT}^{-2}$ $\left[m v \frac{dv}{dx} \right] = \frac{[m][v][v]}{[x]} = \frac{\text{ML}^2\text{T}^{-2}}{\text{L}} = \text{MLT}^{-2}$ | B1 B1 [2] | 1.1 2.1 | Correctly finding the dimensions of both sides is sufficient for B1B1; an explicit conclusion is not necessary. |
| 3 | (b) | Only quantities with the same dimensions can be added (or subtracted) [so $[a^2] = [x^2]$ which means that $[a] = [x]$] | B1 [1] | 2.4 | |
| 3 | (c) | $[k] \text{M}^{-\frac{1}{2}} (\text{L}^2)^{\frac{1}{2}} = \text{LT}^{-1}$ $[k] = \text{M}^{\frac{1}{2}} \text{T}^{-1}$ Alternative solution $v = km^{-\frac{1}{2}} \sqrt{a^2 - x^2} \Rightarrow k = \frac{vm^{\frac{1}{2}}}{\sqrt{a^2 - x^2}}$ so the units of k are $\text{kg}^{\frac{1}{2}} \text{s}^{-1}$ $[k] = \text{M}^{\frac{1}{2}} \text{T}^{-1}$ | M1 A1 M1 A1 [2] | 2.2a 1.1 | Use of formula for v to derive dimensional equation for $[k]$ Use of formula for v to derive units of k . |
| 3 | (d) | $\frac{dv}{dx} = km^{-\frac{1}{2}} (-2x) \frac{1}{2} (a^2 - x^2)^{-\frac{1}{2}}$ $\therefore F = mv \frac{dv}{dx}$ $= m \times km^{-\frac{1}{2}} (a^2 - x^2)^{\frac{1}{2}} km^{-\frac{1}{2}} (-2x) \frac{1}{2} (a^2 - x^2)^{-\frac{1}{2}}$ $\therefore F = -k^2 x$ | M1 M1 A1 [3] | 1.1 1.1 1.1 | Use of chain rule to differentiate v wrt x Use of formula for F with m, v and their $\frac{dv}{dx}$ substituted in. $\frac{dv}{dx} = -km^{-\frac{1}{2}} x (a^2 - x^2)^{-\frac{1}{2}}$ |

| Question | | Answer | Marks | AO | Guidance | |
|----------|-----|---|--|---|--|--|
| 4 | (a) | $\text{KE of } P = \frac{1}{2}mv^2$ $\uparrow C \sin \theta = mg$ $\leftrightarrow C \cos \theta = ma$ $\frac{\cos \theta}{\sin \theta} = \frac{a}{g} = \frac{v^2}{rg}$ PE of P (exceeds that of Q by) $mgh = mg \frac{r}{\tan \theta} = mg \frac{r \cos \theta}{\sin \theta} = mg \frac{v^2}{g} = mv^2$ so So total ME of P exceeds that of Q by $= mv^2 + \frac{1}{2}mv^2 = \frac{3}{2}mv^2 \text{ J}$ | B1 M1 M1 M1 M1 A1 | 1.2 3.3 3.3 3.4 3.4 2.2a | Balancing forces in the vertical. C must be resolved NII in the horizontal using a resolved component of C Eliminating C (and m) between the two equations and using a correct form for a Using the relationship to find the (excess) PE of P in terms of m and v (and possibly g) only AG. Or total ME of $Q = 0$ but some justification of excess for PE at least must be seen in the solution | SSU – change C to R if a better reflection of candidate solutions In this solution, C is the normal contact force between P and the cone and θ is the semi-vertical angle of the cone May see $v^2 = gh$ here and used later h is the vertical height of P above Q Use R instead of C? |
| 4 | (b) | One of: - We have assumed that the radius of the circle which P moves in is the same as the radius of the cone at that level - Q is at V [neither of which is quite true if P and Q do not have a negligible radius] | B1 [1] | 3.5b | Also accept e.g. - CofM of P lies on the edge of the cone - CofM of Q lies at V | V is the vertex of the cone |
| 4 | (c) | Resistance to the motion of P should be included in the model. | B1 [1] | 3.5c | eg air resistance. Allow friction. | |

| Question | | Answer | Marks | AO | Guidance |
|----------|-----|---|-----------|-------------|--|
| 5 | (a) | $F \propto \frac{1}{(t+1)^2}$ $\therefore F = \frac{k}{(t+1)^2} = ma = 3 \frac{dv}{dt} \Rightarrow \frac{dv}{dt} = \frac{k}{3(t+1)^2}$ | B1 | 3.1b | AG |
| | | | [1] | | |
| 5 | (b) | $\therefore v = \frac{k}{3} \int \frac{1}{(1+t)^2} dx = \frac{-k}{3(1+t)} + u$ $t = 0, v = 0 \Rightarrow k = 3u$ $t = 1, v = 2 \Rightarrow 2 = \frac{-k}{3(1+1)} + u$ $\Rightarrow u = 4, k = 12 \Rightarrow v = 4 - \frac{4}{1+t} \quad \text{oe}$ | M1 | 3.1b | Separating variables correctly and integrating to $\frac{C}{1+t}$; award if “+ u” missing |
| | | | M1 | 3.1b | Substituting initial values to determine a relationship between k and u . |
| | | | M1 | 3.1b | Substituting $t = 1$ to determine a second relationship between k and u oe. |
| | | | A1 | 1.1 | eg $v = \frac{4t}{1+t}$ |
| | | | [4] | | |
| 5 | (c) | $\frac{dx}{dt} = 4 - \frac{4}{1+t} \Rightarrow x = 4t - 4\ln(1+t) + c$ $t = 0, x = 1 \Rightarrow c = 1 \text{ so } x = 4t - 4\ln(1+t) + 1$ | M1 | 1.1 | For integrating their ‘v’ to reach an expression involving $k \ln(1+t)$ oe |
| | | | A1 | 1.1 | Can be awarded even if no “+ c” |
| | | | [2] | | |
| 5 | (d) | $95\% \text{ of } v_T = 0.95 \times 4 = 3.8$ $v = 3.8 \Rightarrow 3.8 = 4 - \frac{4}{1+t}$ $\Rightarrow 0.2 = \frac{4}{1+t} \Rightarrow 1+t = 20 \Rightarrow t = 19$ | B1 | 2.2a | |
| | | | M1 | 3.1b | Setting their v to their 3.8 in the appropriate equation |
| | | | A1 | 1.1 | |

| Question | Answer | Marks | AO | Guidance |
|----------|--|--------------------------------------|--------------------------|--|
| | so $x = 4 \times 19 - 4 \ln(1+19) + 1$ $x = 77 - 4 \ln 20$ so distance moved is $76 - 4 \ln 20$ m or awrt 64 m | M1 A1 [5] | 1.1 1.1 | Substituting their t into the equation for x |

| Question | | Answer | Marks | AO | Guidance | |
|----------|-----|--|---|--|---|--|
| 6 | (a) | $20 = 4u \Rightarrow u = 5$ Initial energy = $\frac{1}{2} \times 4 \times 5^2$ Energy at $\theta = \frac{1}{2} \times 4 \times v^2 + 4g \times 0.8(1 - \cos \theta)$ $2v^2 + 15.68 = 50 \Rightarrow v^2 = 17.16$ Radial: $a_r = \frac{v^2}{0.8} = \frac{17.16}{0.8}$ Tangential: $ma_t = -mg \sin \frac{\pi}{3}$ $a = \sqrt{\left(-\frac{\sqrt{3}g}{2}\right)^2 + \left(\frac{429}{20}\right)^2} = 23.067...$ so the magnitude of the acceleration is 23.1 m s^{-2} (3 sf) | B1 B1 M1 A1 M1 M1 A1 | 1.1 1.1 1.1 1.1 3.1b 3.1b 1.1 | = 50 Attempt to derive total ME at general or specific angle Equating energies to derive a value for v^2 Correct form for centripetal acceleration and use of v^2 NII for tangential direction with weight resolved (- not necessary) | Assuming zero PE level at initial level of P $v = 4.142...$ $a_r = 21.45$ $a_t = -\frac{\sqrt{3}g}{2} = -8.4870...$ |
| 6 | (b) | Radial: $T - 4g \cos \theta = \frac{4v^2}{0.8}$ $v^2 = 5^2 - 2g \times 0.8(1 - \cos \theta)$ $-7.84 \cos \theta = 9.32 + 15.68 \cos \theta$ $\therefore \cos \theta = -\frac{9.32}{23.52}$ $\therefore \theta = 113.3^\circ$ or 1.98 rads | M1 M1 A1 | 2.1 2.1 3.2a | NII for radial direction. T could be set to 0. Correct form of a_r . v^2 in terms of $\cos \theta$ from conservation of energy | $v^2 = 9.32 + 15.68 \cos \theta$ |
| | | | [7] | | | |
| | | | [3] | | | |

| Question | | Answer | Marks | AO | Guidance | |
|----------|-----|---|--|--|---|--|
| 7 | (a) | $u_{Ax} = 3, u_{Bx} = -2$ $m_A \times 3 + m_B \times -2 = m_A v_{Ax} + m_B \times 0$ $v_{Ax} = 3 - \frac{2m_B}{m_A}$ $e = \frac{0 - v_{Ax}}{3 - -2}$ or $v_{Ax} = -5e$ $e \geq 0 \Rightarrow \frac{2m_B}{5m_A} - \frac{3}{5} \geq 0 \Rightarrow \frac{m_B}{m_A} \geq \frac{3}{2}$ $e \leq 1 \Rightarrow \frac{2m_B}{5m_A} - \frac{3}{5} \leq 1 \Rightarrow \frac{m_B}{m_A} \leq 4$ | B1 M1 A1 M1 A1 A1 | 3.3 3.4 1.1 3.4 2.1 2.1 | Resolving horizontal components of u_A and u_B . Accept $u_A = 5 \cos \alpha$ and $u_B = -4 \cos \frac{\pi}{3}$ but must have opposite signs or directions indicated on diagram. Conservation of momentum Restitution AG AG | Signs may be reversed throughout May be seen in (b) $e = \frac{0 - \left(3 - \frac{2m_B}{m_A}\right)}{3 - -2} = \frac{2m_B}{5m_A} - \frac{3}{5}$ |
| 7 | (b) | Total initial KE = $\frac{1}{2} \times 2 \times 5^2 + \frac{1}{2} \times 6 \times 4^2 = 73$ $v_{Ay} = u_{Ay}, v_{By} = u_{By} = 2\sqrt{3}$ $v_{Ax} = -3$ KE Loss = $73 - \left(\frac{1}{2} \times 2 \times (3^2 + 4^2) + \frac{1}{2} \times 6 \times (2\sqrt{3})^2\right) = 12 \text{ J}$ | B1 M1 M1 A1 | 1.1 3.4 3.4 1.1 | Perpendicular components found and unchanged Using their formula for v_{Ax} from (a). | NB If method mark for conservation of momentum not seen in (a) then award M1 in (a) if either $m_A \times 3 + m_B \times -2 = m_A v_{Ax}$ or $2 \times 3 + 6 \times -2 = 2v_{Ax}$ seen here If method mark for restitution not seen in (a) then award M1 in (a) if seen here. |
